

# QUICKART

QUICKART M3, M3 HD AND M4 FROM DANE TECHNOLOGIES

**EXACT**  
I BUTIK

## > QUICKART M3, M3HD, M4

The QuickART M3 and M3 HD are the third generation of powerful battery-driven shopping trolley retrieval systems from Dane Technologies. The M4 is the latest generation and still more easily manoeuvrable due to a better weight distribution over the drive shaft.

QuickART has the unique solution with remote control. It allows the operator to steer the load from the front, simultaneously with the machine working to push the trolleys forward. In this manner, a person can safely manage a line of shopping trolleys while also having full control going forward over what is occurring. QuickART was designed to work with heavy tasks the entire day long (up to 12 hours) on only one charge.

The built-in battery charger is easy to connect up. The only thing required is a common grounded 230 volt outlet.

### Safety features:

The automatic parking brake engages as soon as the machine stops. Emergency stop for backing machine prevents people from being pinned against a wall or obstacle. The control panel contains the on/off button, charging status, warning horn, etc. The throttle twist-grip is stepless for speeds of

0-6.1 km/h. Safe handling of shopping trolleys in tight spaces makes it necessary that the twist-grip be stepless. The remote control has two speeds, an emergency stop and a warning horn. A red brake light and an orange flashing light on a raised antenna contribute to a safer environment for both customers as well as operators.

M3	M3HD	M4
1.25 Hp	1.5 Hp	1.34 Hp
12 inch wheel front capacity 30 trolleys	16 inch wheel front capacity 35 trolleys	12 inch wheel front capacity 30 trolleys
